-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 February 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,2,7,8,13,14 and 19-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,2,7,8,13,14 and 19-34 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 26 March 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2193

DETAILED ACTION

1. This Office Action is responsive to communications filed 13 February 2006.
2. Per Applicants' request, amended claims 1, 7, 13 and 19 have been entered. Newly added claims 31-34 have been entered. Claims 1, 2, 7, 8, 13, 14 and 19-34 are currently pending and have been examined.

Response to Arguments

3. Applicant's arguments, see pages 12-14 of the Remarks, filed 13 February 2006, with respect to the rejection(s) of claim(s) 1, 2, 7, 8, 13, 14 and 19-27 under 35 U.S.C. § 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of newly found prior art.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1, 2, 7, 8, 13, 14 and 19-34 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent 6,263,339 to Hirsch.

Per claims 1, 7, 13 and 19:

Art Unit: 2193

Hirsch discloses:

- dragging a graphical representation for a server processing resource from a server explorer module to a visual design surface module to add a processing item to a programmable data object being created in the visual design surface module (Note at least Figure 1 and the corresponding sections of the disclosure. Further, “The Graphics tab 16 presents a categorized palette of all graphical objects that can be added to a scene...” in col. 5 lines 55-57)
- identifying data schema associated with the server processing resource added to the programmable data object in response to the server processing resource being dropped in the visual design surface module (“active database schema...” in col. 6 lines 35-36)
- creating a typed dataset containing data structures corresponding to the data schema associated with the server processing resource (“A data element is the graphical representation of a row resulting from a query.” in col. 4 lines 48-49. As the query is processed, the resulting row would be stored in a newly created dataset containing typed data corresponding to the row data so that the graphical data element can be associated with the data resulting from the query.)
- creating a command adapter to provide data transfer commands within the programmable data object between the programmable data object and the server processing resource (“As data sources are defined, they are named and added to a world... They are then available for execution... When used in a layout, each row resulting from the query is transformed into a graphical representation represented by a data element.” in col. 5 lines 14-20. A command adapter must be present to permit interaction between the data source and the graphical representation on the client.)

Art Unit: 2193

- creating a data transfer connection between the programmable data object and the server processing resource (“As data sources are defined, they are named and added to a world...They are then available for execution...When used in a layout, each row resulting from the query is transformed into a graphical representation represented by a data element.” in col. 5 lines 14-20. A data transfer must be created if the defined data source is to interact with the graphical data elements.)

substantially as claimed.

Per claims 2, 8 and 14:

Hirsch further discloses initialization methods to support the items added to the programmable data object as claimed (“all graphical objects that can be added to a scene...” in col. 5 line 56. The objects must contain initialization methods if they are to be used.)

Per claims 20 and 21:

Hirsch further discloses an explorer interface module, a user interface module, and a class generation module (Note Figure 1 and the corresponding sections of the disclosure.), as well as operations to complete the drag/drop process of a server resource onto the visual design surface as claimed (Note Figure 1 and the corresponding sections of the disclosure. When a user drops a component onto the scene, operations would complete the dropping process.)

Per claims 22, 24 and 26:

Hirsch further discloses a module for generating a function that fills a typed dataset with data obtained from a database, and a module for generating a function that updates a database using the

Art Unit: 2193

data (“...linked to data stored in a database...” in col. 4 line 21. Further, “...showing data that has been retrieved from two datasets...” in col. 18 lines 11-12), a module for generating tables records, a module for generating the relationship data for fields within the records, and a module for generating the database views (Note col. 6 lines 32-42), and modules for generating processing functions for the data objects as claimed (“Data sources can be named SQL queries that may be parameterized...as data sources are defined, they are named and added to a world...they are then available for execution.” in col. 5 lines 12-16.)

Per claims 23, 25 and 27:

Hirsch further discloses generating updated source code for the functions as claimed (“The data sources...may be updated automatically when data source columns are created, deleted, or edited...edit operations in the query diagram or SQL text...Changes to the query may cause the data sheet to be refreshed...” in col. 8 lines 4-21)

Per claims 31-33:

Hirsch further discloses a data connection object (“connections...” in col. 6 line 26), a managed resource module for providing the data transfer connection with address and identification information to establish the data transfer connection (“As data sources are defined, they are named and added...” in col. 5 lines 14-15. Address information must be provided if the connection is to work.), a persistent data storage for maintaining the address and identification information (This information must inherently be maintained if the system is to keep track of data sources.), editing the processing items within the visual design surface module, the processing items comprising properties and source code (“edit operations in the query diagram or SQL text...” in col. 8 lines 18-

Art Unit: 2193

19. Further, note Figures 1 and 2.), and updating the processing items as claimed (“...updated to reflect the change” in col. 9 lines 4-5)

Per claim 34:

Note the rejection regarding claims 31-33, and further, Hirsch discloses a properties edit module for retrieving properties, a user interface module for presenting properties, and accepting edits from the programmer, and a class update module for identifying all other items within the visual design surface module that are affected by the changes made to the edited item, and updated the identified items consistent with the edits as claimed (“edit operations in the query diagram or SQL text...” in col. 8 lines 18-19. Further, note Figures 1 and 2. Finally, “...updated to reflect the change” in col. 9 lines 4-5)

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Trenton J. Roche whose telephone number is (571) 272-3733. The examiner can normally be reached on Monday - Friday, 9:00 am - 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki can be reached on (571) 272-3719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
